

## Floating shelf manual

Hello! You are now the happy owner of this one-of-a-kind floating shelf. Here is a brief description for this furniture and some useful suggestions for how to use it.

### What makes it floating?

Its mounting is invisible, the shelf does not have any bracket - instead of this, a simple but efficient method is used called french cleat. This french cleat is included in the package.

### What is in the box?

- The shelf /shelves
- 1 x french cleat for the wall / shelf
- 1 x drawer pull / shelf (assembled or separately)

Screws are not included because each wall type requires different screw / wall-plug usage.

### How to mount the shelf?

You have to mount the french cleat part on your wall securely and horizontally. After that, the only thing you need to do is to mount the shelf by hanging it on to the wall.

### How strong is the shelf?

The shelf is designed to be stronger compared to your planned usage, however, make sure to avoid extreme weight, like sitting on it or letting children climb on them, etc.

### How to maintain the shelf?

When cleaning the shelf, make sure to use dry cloth. Try to avoid any water get in contact with the shelf.

The wood front can be sanded and oiled again if it loses its smooth touch or color over the years, but in general usage there is no need for maintenance. The wood may slowly darken over the years, which is normal and it adds to its look.

Please note that in case of custom orders, when the furniture is made for deadline, it may have smell of oil because the wood did not have enough time to completely lose this. A few days may be necessary to lose the smell. To speed it up, you may store the shelf in a place with good ventilation for a few days.

### Quality notice

In case of custom orders, the wood color and grain may be different than the photo in the advertisement.

### Used materials:

#### Full white

- mdf (cabinet)
- plywood (drawer)

#### White with wooden drawer

- mdf (cabinet)
- plywood (drawer)
- solid wood (drawer front)
